

AS the smoke clears and I walk in to the light, I said to myself “I need to start heading home for dinner “which was only vegetables and muddy water. It is all I have to live on. But while I am at the brick factory I always get a new blister from carrying so many bricks from the brick factory and I don’t have any gloves to prevent that. And I can’t afford that because I barely make enough money to get the family food and I have barely enough time for sleep because in the morning till 10 am I have to work and then I have ten minutes to walk to school for 4 hours then rest of the day work again till 7 a clock but every day my mom would want me to buy a pair of gloves so I don’t get blisters everyday but I always tell here that we need the money for food and water to survive. But as I was walking home from the brick factory I found a glove that fit me good but only one so I just kept it at home. Our house was on the grounds of that brick factory and still is as dusty as ever and still I only have a little red scarf to protect myself from the dust and one single glove then suddenly as I was thinking about I was walking home I noticed something in the ground it was the other glove! So I rushed home telling my mom and dad and they were exited and told me to go to work as if I was a new man and later on we figured out there was a hidden underground lake under us so then we got clean clear water for the rest of our life.
